

AIR VACUUM SEPARATORS

AVS-3000

**Australia's No.1 Recycling Solution.
Australian Made For Australian Conditions.**

REMOVE 'LIGHTS'

The AVS-3000 is a valuable addition to any recycling process. The Airvac and AirKnife are designed to remove light weight items such as paper, plastic, leaves, small wood and foil from the material stream. The heavier materials are unaffected by the airflow and continue through and along the conveyor to the stock pile.

Available in electric and hydraulic models, Bost can supply a system to suit your needs.

RECYCLING

If you are currently utilising pickers on a recycling line the AVS-3000 offers many improvements and efficiencies.

A much higher percentage of small lights that manual pickers miss will be captured by the AVS-3000 resulting in a cleaner finished product.

It is able to remove the lights fractions via the vacuum tube and send it to a designated storage area e.g. Skip bin to ensure a much cleaner product and work area.

Adjustable suction levels through variable speed control on both units to customise to your needs.

Compact and portable, it can be easily moved to different locations.
